

For this tutorial you will need the following things:

1. A PSP of course
2. a Pandora battery
3. Rain's simple MMs Maker (Get it [here](#))

If you have all of those things then now what you need to do is run MMs maker make your magic memory stick with any firmware you want as long as it's custom firmware. Then put your Pandora battery in your PSP and it should turn on. Follow the instructions and when you finish you will have custom firmware. That's all you have to do.
